

Chapter 1: Introduction

- Components of computer security
- Threats
- Policies and mechanisms
- The role of trust
- Assurance
- Operational Issues
- Human Issues

Basic Components

- Confidentiality
 - Keeping data and resources hidden
- Integrity
 - Data integrity (integrity)
 - Origin integrity (authentication)
- Availability
 - Enabling access to data and resources

Classes of Threats

- Disclosure
 - Snooping
- Deception
 - Modification, spoofing, repudiation of origin, denial of receipt
- Disruption
 - Modification
- Usurpation
 - Modification, spoofing, delay, denial of service

Policies and Mechanisms

- Policy says what is, and is not, allowed
 - This defines “security” for the site/system/*etc.*
- Mechanisms enforce policies
- Composition of policies
 - If policies conflict, discrepancies may create security vulnerabilities

Goals of Security

- Prevention
 - Prevent attackers from violating security policy
- Detection
 - Detect attackers' violation of security policy
- Recovery
 - Stop attack, assess and repair damage
 - Continue to function correctly even if attack succeeds

Trust and Assumptions

- Underlie *all* aspects of security
- Policies
 - Unambiguously partition system states
 - Correctly capture security requirements
- Mechanisms
 - Assumed to enforce policy
 - Support mechanisms work correctly

Types of Mechanisms

secure

precise

broad

set of reachable states

set of secure states

Assurance

- Specification
 - Requirements analysis
 - Statement of desired functionality
- Design
 - How system will meet specification
- Implementation
 - Programs/systems that carry out design

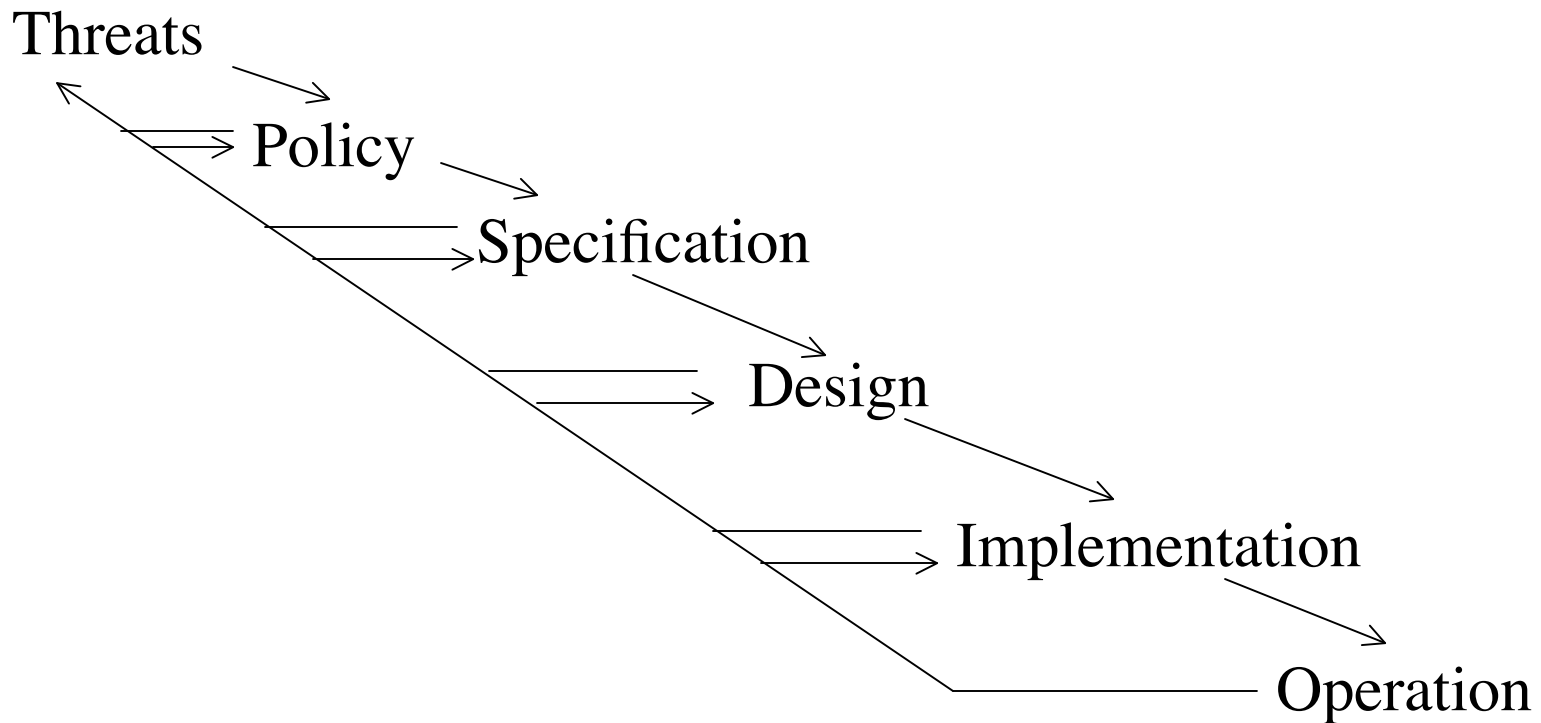

Operational Issues

- Cost-Benefit Analysis
 - Is it cheaper to prevent or recover?
- Risk Analysis
 - Should we protect something?
 - How much should we protect this thing?
- Laws and Customs
 - Are desired security measures illegal?
 - Will people do them?

Human Issues

- Organizational Problems
 - Power and responsibility
 - Financial benefits
- People problems
 - Outsiders and insiders
 - Social engineering

Tying Together

Key Points

- Policy defines security, and mechanisms enforce security
 - Confidentiality
 - Integrity
 - Availability
- Trust and knowing assumptions
- Importance of assurance
- The human factor
