

Outline for January 27, 2012

Reading: §6

1. Passing values to functions [*args.py*]
 - a. Formal parameters in subject definition
 - b. Actual parameters (arguments)
 - c. Matching arguments to formal parameters
 - d. Local variables
2. How Python does function calls [*peri3.py*]
 - a. Caller suspends execution at point of call, remembers where it left off
 - b. Formal parameters assigned values from actual parameters
 - c. Execute function body
 - d. Return control to where caller left off
